```

```
root@DESKTOP-UB9S494:/D# X + v
history      Show the history of an image
import       Import the contents from a tarball to create a filesystem image
inspect      Return low-level information on Docker objects
kill         Kill one or more running containers
load         Load an image from a tar archive or STDIN
logs         Fetch the logs of a container
pause        Pause all processes within one or more containers
port         List port mappings or a specific mapping for the container
rename       Rename a container
restart      Restart one or more containers
rm           Remove one or more containers
rmi          Remove one or more images
save         Save one or more images to a tar archive (streamed to STDOUT by default)
start        Start one or more stopped containers
stats        Display a live stream of container(s) resource usage statistics
stop         Stop one or more running containers
tag          Create a tag TARGET_IMAGE that refers to SOURCE_IMAGE
top          Display the running processes of a container
unpause      Unpause all processes within one or more containers
update       Update configuration of one or more containers
wait         Block until one or more containers stop, then print their exit codes

Global Options:
--config string      Location of client config files (default "/root/.docker")
-c, --context string  Name of the context to use to connect to the daemon (overrides DOCKER_HOST env var and default context set with "docker" context use)
-D, --debug           Enable debug mode
-H, --host list       Daemon socket to connect to
-l, --log-level string Set the logging level ("debug", "info", "warn", "error", "fatal") (default "info")
--tls                Use TLS; implied by --tlsverify
--tlscacert string   Trust certs signed only by this CA (default "/root/.docker/ca.pem")
--tlscert string      Path to TLS certificate file (default "/root/.docker/cert.pem")
--tlskey string       Path to TLS key file (default "/root/.docker/key.pem")
--tlsverify           Use TLS and verify the remote
-v, --version         Print version information and quit

Run 'docker COMMAND --help' for more information on a command.

For more help on how to use Docker, head to https://docs.docker.com/go/guides/
